

PROJECT NAME: Salt Lake County Back-Up Emergency Disaster Data Center

RECIPIENT: Salt Lake County

LOCATION: Salt Lake County, Utah

PURPOSE: Salt Lake County is located in and around Wasatch Fault, which is a historic center of large earthquakes. Accordingly, the County has maintained a system for “backing up” vital government, civic and business records. However, this system is rudimentary and not sufficient to efficiently access these records in the event of medium or large-scale disaster. This alternate facility will have a redundant network sufficient to “back up” existing files and maintain regular business operations until services can be restored at the primary site. Under this initiative, the County would pay for all annual costs once the alternative datacenter is established.

AMOUNT: \$1,812,750
